	Urgent	Not Urgent
Important	• A working CLI • One command to start entire process (including server) • Processing only new/changed files • Directly reading and writing in the notes file	• Customizable instruction prompt • Only processing changes since last run • Support for non-Markdown formats • Throttling inference to reduce heat • Confidence levels and warnings for certain changes • Linking between files
Not important	• Model selection: huggingface • Local inference: llama.cpp • Reviewing changes: git diff • Notetaking and viewing: Obsidian • CLI parsing: typer	• Detecting hardware and suggesting model • GUI • Easier setup for the llama server • Running MoE with SSD streaming • Fan controller • Non-markdown handling • Model choice in the CLI
